Explore Microsoft Sentinel

Challenge Overview

Understand the scenario

You are a new trainee for Hexelo, an organization that needs to train employees on how to use Microsoft Sentinel. First, you will set up the permissions to ensure access to the resources that will get deployed to support Microsoft Sentinel. Next, you will walk through the steps for connecting Microsoft Sentinel to your data sources. Finally, you will setup a workbook, and then you will do a brief walk-through of some of key capabilities available in Microsoft Sentinel.

Create a Microsoft Sentinel instance in Azure

Hints Enabled

No Yes

- Sign in to  **Windows 11** as  **Administrator** by using  **Passw0rd!** as the password.

 Expand this hint for guidance on logging in to a Virtual Machine (VM):

 Select the  **Type Text** icon to enter the associated text into the virtual machine.

- Navigate to  <https://portal.azure.com>, and then sign-in as  **{USERNAME}** by using  **{PASSWORD}** as the password .

💡 Expand this hint for guidance on signing into the Azure portal.

- Open a new browser tab, and then go to [T https://portal.azure.com](https://portal.azure.com).
- Sign in as [T {USERNAME}](#) by using [T {PASSWORD}](#) as the password.
- If asked to save the password, select **Never**.
- If asked to Stay signed in, select **No**.
- Close any Welcome pages.

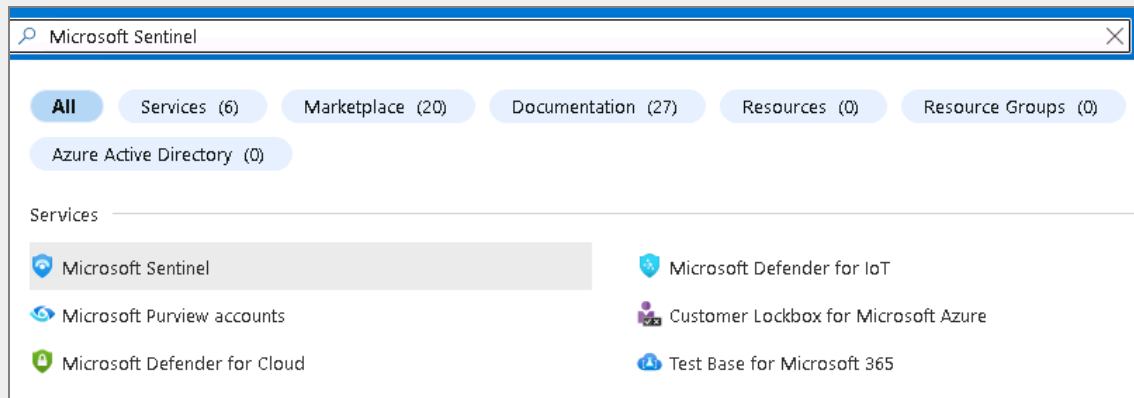

💡 Want to learn more? Review the documentation on [signing into the Azure portal](#).

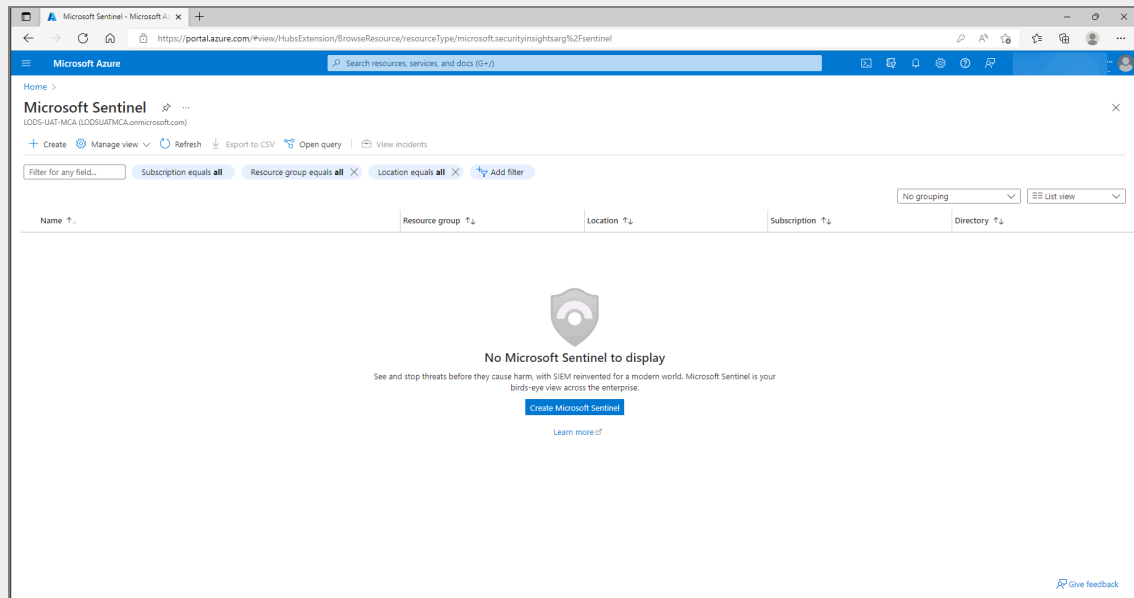

- Create a Sentinel instance, and then add it to a new workspace named [T LogAnalytics-workspace](#) in the **East US** region by using the **RG1** Resource group..

💡 Expand this hint for guidance on creating a Sentinel instance.

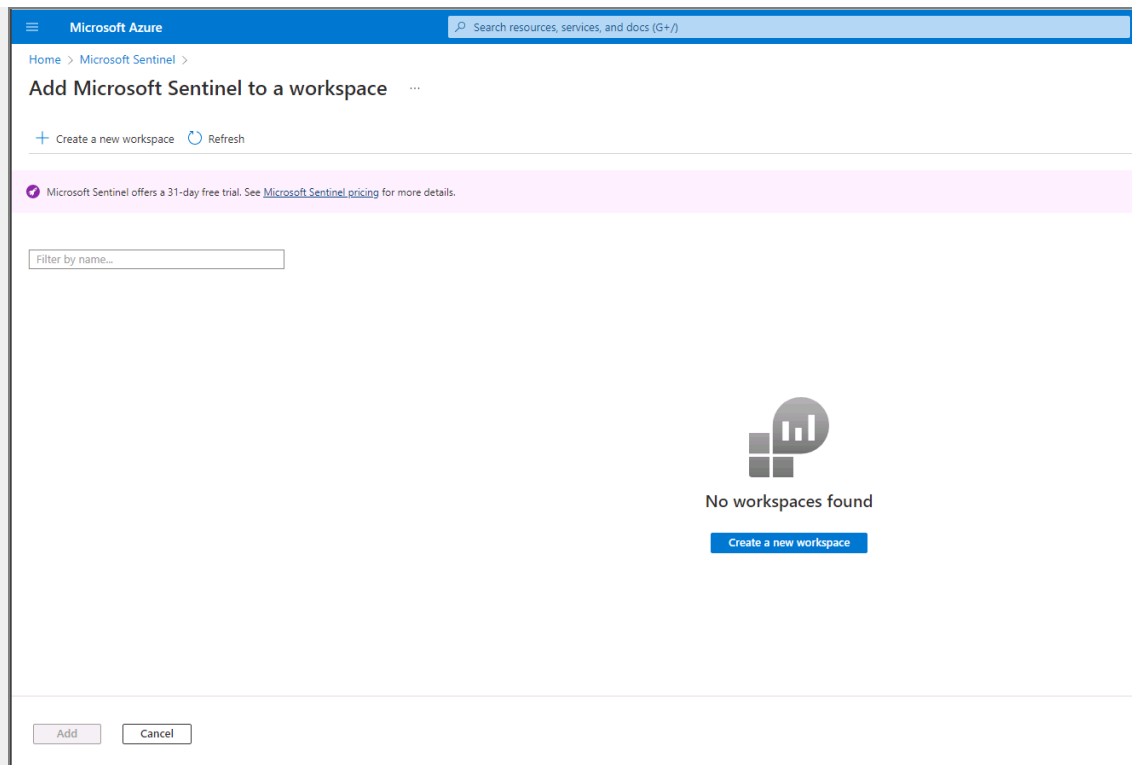

- In Microsoft Azure, in the **Search resources, services, and docs (G+)** search box, enter **Microsoft Sentinel**.
- From the search results, under **Services**, select **Microsoft Sentinel**.

- From the **Microsoft Sentinel** page, select **Create Microsoft Sentinel**.

- From the **Add Microsoft Sentinel to a workspace** page, select **Create a new workspace**.

- From the **Create Log Analytics workspace** page, under the **Basics** tab, verify that the correct **Subscription** and **Resource group** are selected.
- Under **Instance details**, in **Name**, enter **T** LogAnalytics-workspace, and then use the menu to select the **East US** region.

Create Log Analytics workspace

Basics Tags Review + Create

i A Log Analytics workspace is the basic management unit of Azure Monitor Logs. There are specific considerations you should take when creating a new Log Analytics workspace. [Learn more](#)

With Azure Monitor Logs you can easily store, retain, and query data collected from your monitored resources in Azure and other environments for valuable insights. A Log Analytics workspace is the logical storage unit where your log data is collected and stored.

Create a Non-compliance message and connect to a workbook

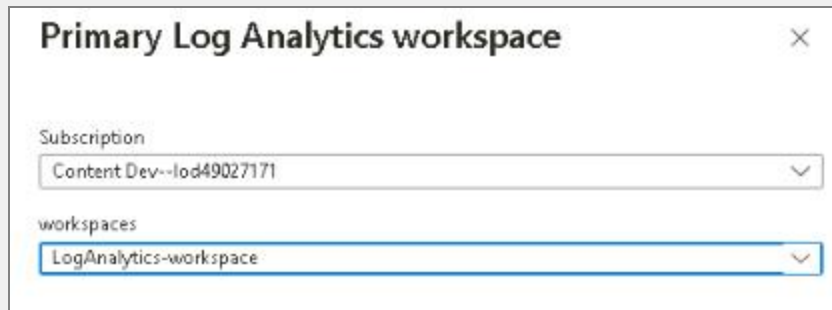

Hints Enabled

No Yes

- Create a Non-compliance message to help users understand why a resource is not compliant with the policy.

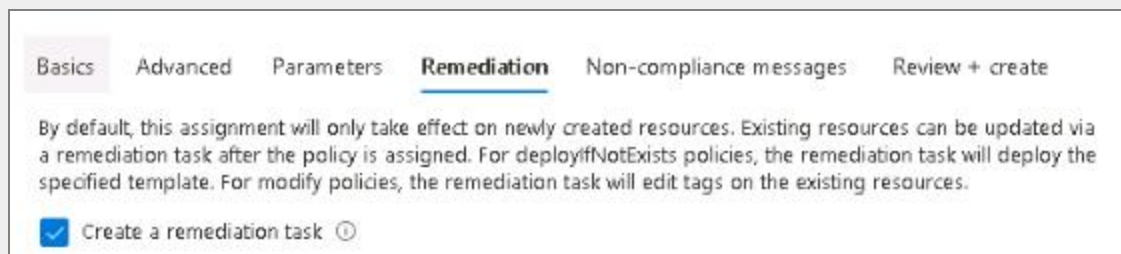

💡 Expand this hint for guidance on creating a Non-compliance message.

- Select the **Parameters** tab, select the ... option, and then select the **LogAnalytics-workspace** workspace.

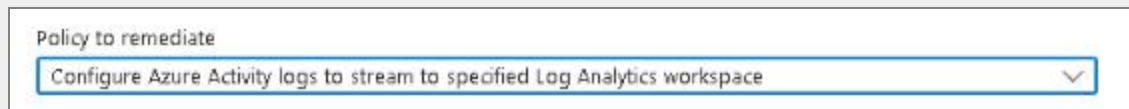

A screenshot of a dialog box titled "Primary Log Analytics workspace". It contains two dropdown menus. The first is labeled "Subscription" and has "Content Dev--lod49027171" selected. The second is labeled "workspaces" and has "LogAnalytics-workspace" selected.

- Select the **Remediation** tab, and then enable **Create a remediation task**.

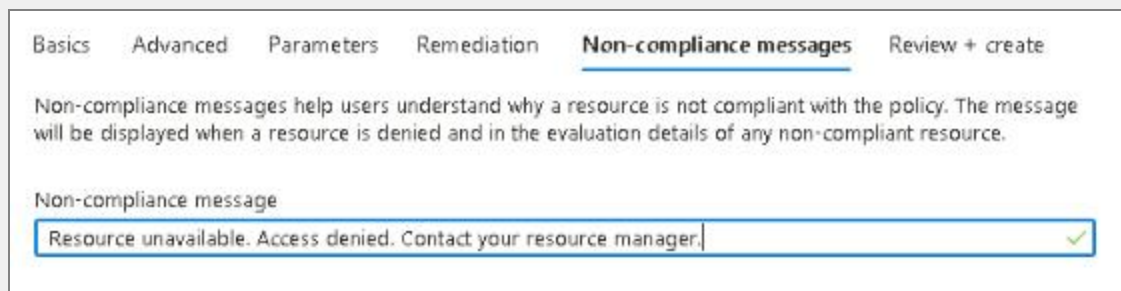

A screenshot of the "Remediation" tab in a configuration interface. It shows tabs for "Basics", "Advanced", "Parameters", "Remediation", "Non-compliance messages", and "Review + create". Below the tabs, there is explanatory text about remediation tasks. At the bottom, there is a checkbox labeled "Create a remediation task" which is checked.

- Under **Policy to remediate**, select the **Configure Azure Activity logs to stream to specified Log Analytics workspace** policy.

A screenshot of a dropdown menu labeled "Policy to remediate". The selected option is "Configure Azure Activity logs to stream to specified Log Analytics workspace".

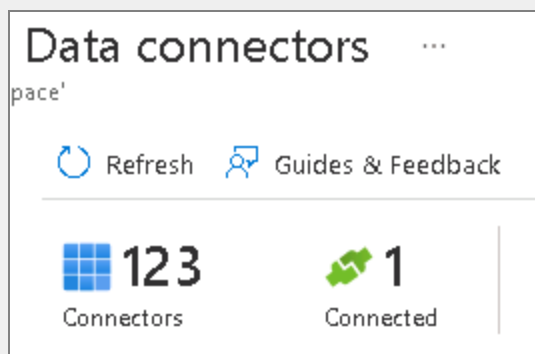

- Under **Managed Identity**, in System assigned identity location, select **US East**.
- Select the **Non-compliance messages** tab, and then enter **Resource unavailable. Access denied. Contact your resource manager..**

A screenshot of the "Non-compliance messages" tab. It shows tabs for "Basics", "Advanced", "Parameters", "Remediation", "Non-compliance messages", and "Review + create". Below the tabs, there is explanatory text about non-compliance messages. At the bottom, there is a text input field labeled "Non-compliance message" containing the text "Resource unavailable. Access denied. Contact your resource manager.." with a green checkmark icon to its right.

- Select the **Review + create** tab, review the settings, and then select **Create**.
- On the side pane, verify the connected status.

- Close the **Azure Activity** window to return to the **Microsoft Sentinel | Data connectors** page.
- The top of the **Microsoft Sentinel | Data connectors** page should display **1 Connected** to reflect the data connection to Azure Activity.

 Want to learn more? Review the documentation on [creating a Non-compliance message](#).

 Please note that the assignment may take around 30 minutes to take effect. If the connection does not populate select **Refresh** from the menu.

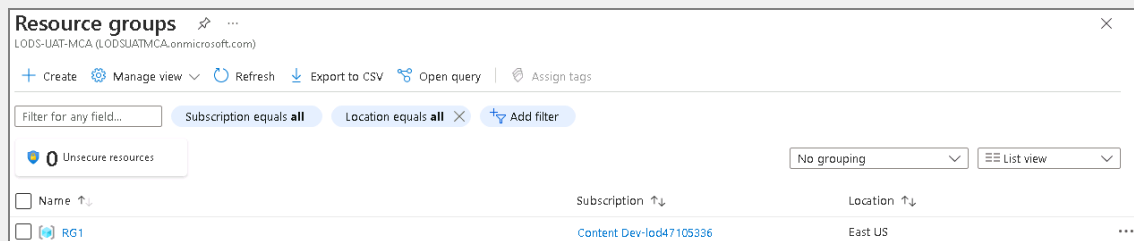

- Create some activity.

💡 Expand this hint for guidance on creating activity.

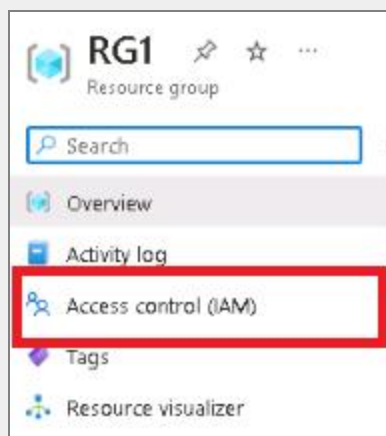

- In **Microsoft Azure**, from the top of the page, in the **Search resources, services, and docs (G+)** search box, enter **T resource groups**.
- From the search results, under **Services**, select **Resource groups**.

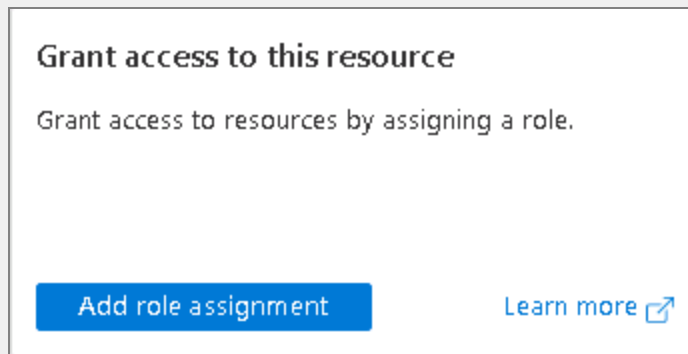

- From the **Resource groups** page, select the resource group associated with Microsoft Sentinel, **{RESOURCE_GROUP_NAME}**.

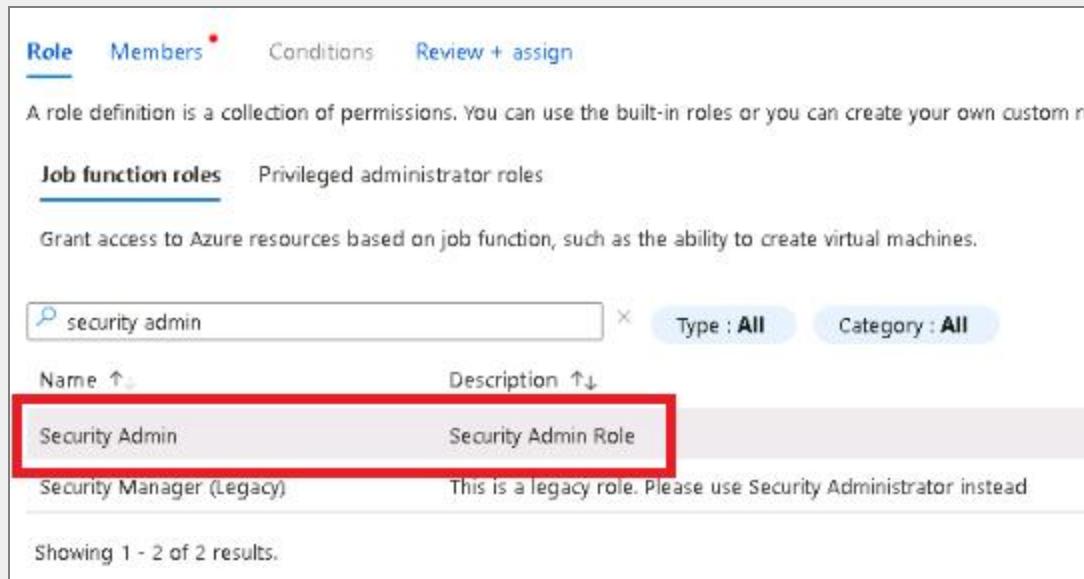

- From the **{RESOURCE_GROUP_NAME}** page, on the left navigation, select **Access control (IAM)**.

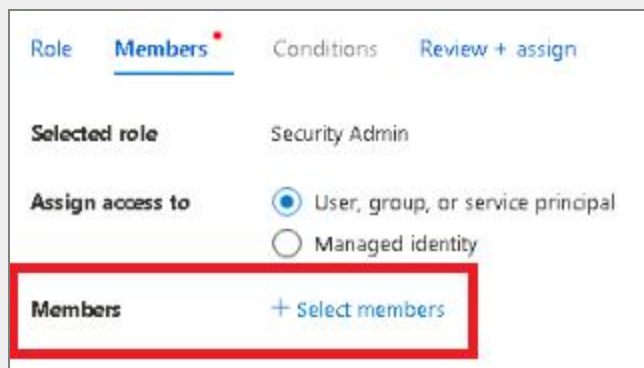

- From the {RESOURCE_GROUP_NAME} | **Access control (IAM)** page, under **Grant access to this resource**, select **Add role assignment**.

- From the **Add role assignment** page, select the **Role** tab.
- In the Search by role name, description, permission, or id search box, enter **security admin**, and then select **Security Admin**.

- Select **Next**, and then on the **Members** tab, in **Assign access to**, verify that ****User, group, or service principal**** is selected.
- In **Members**, choose **Select members**.

- From the **Select members** window, in the searchbox, enter **T {USERNAME}**, and then select **{USERNAME}**.
- Select **Select**.

- Verify the member was successfully added, and then select **Review + assign**.

Summary

Congratulations, you have completed the **Explore Microsoft Sentinel** Challenge Lab.

You have accomplished the following:

- Created a Sentinel instance in Azure.
- Configured Sentinel resources.
- Explored Microsoft Sentinel.

Ending your lab

To ensure your lab is recorded as complete, select **Submit** or **End** below. Exiting [X] the lab will result in an incomplete status.

 Once you select **Submit** or **End**, you will not be able to return to this Challenge Lab.

Your feedback is important!

As you end your Challenge Lab, please take a few minutes to complete the short survey that will appear in the next window. Alternatively, you may provide your feedback directly to [Challenge Labs feedback](#).

Looking for your next Challenge Lab?

Below are recommended Challenge Labs to try next.

- Create detections and perform investigations by using Microsoft Sentinel [Guided]
- Importing Splunk data into Microsoft Sentinel [Guided]
- Introduction to Microsoft Sentinel, Azure Monitoring agent, and syslog incident monitoring [Guided]
