 The Azure Activity Data Connector in Microsoft Sentinel is a tool that allows you to ingest Azure Activity Logs into Microsoft Sentinel. 

Azure Activity Log is a subscription log that provides insight into subscription-level events that occur in Azure. This includes events from Azure Resource Manager operational data, service health events, write operations taken on the resources in your subscription, and the status of activities performed in Azure.

- Configure Azure Activity logs to stream to the **SentinelHexelo-LAW** workspace.

💡 Expand this hint for guidance on configuring Azure Activity logs to stream to a Log Analytics workspace. ^

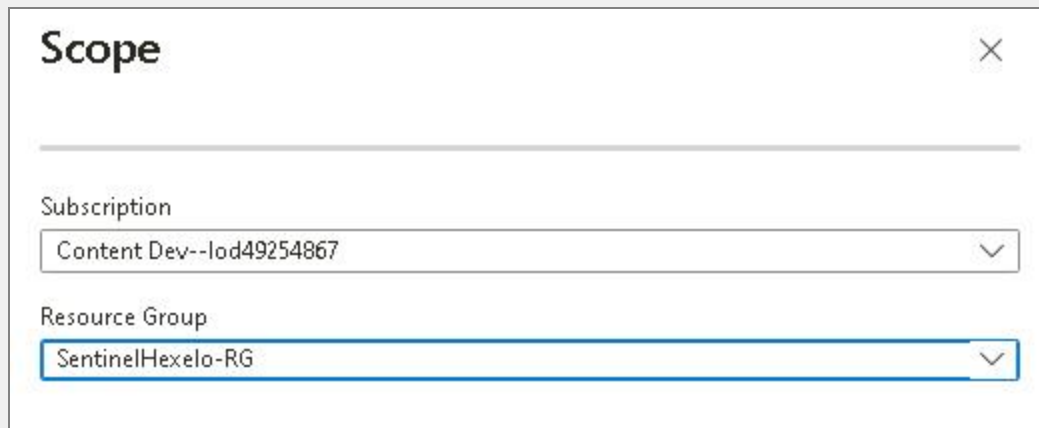

- In the Instructions pane, scroll down, and then select **Launch Azure Policy Assignment wizard**.

Launch the Azure Policy Assignment wizard and follow these steps:

1. In the **Basics** tab, click the button with the three dots to the right of the Scope field.
2. In the **Parameters** tab, choose your Microsoft Entra ID application, and then choose "True" all the log and metric types you want to stream.
3. To apply the policy on your existing resources, click the button with the three dots to the right of the Resource Group field.

[Launch Azure Policy Assignment wizard >](#)

- On the Configure Azure Activity logs to stream to specified Log Analytics workspace page, on the Basics tab, in Scope, select the three dots to the right of the Scope field.
- On the Scope blade, in Subscription, select your available subscription, in Resource group, select **SentinelHexelo-RG**, and then choose **Select**.

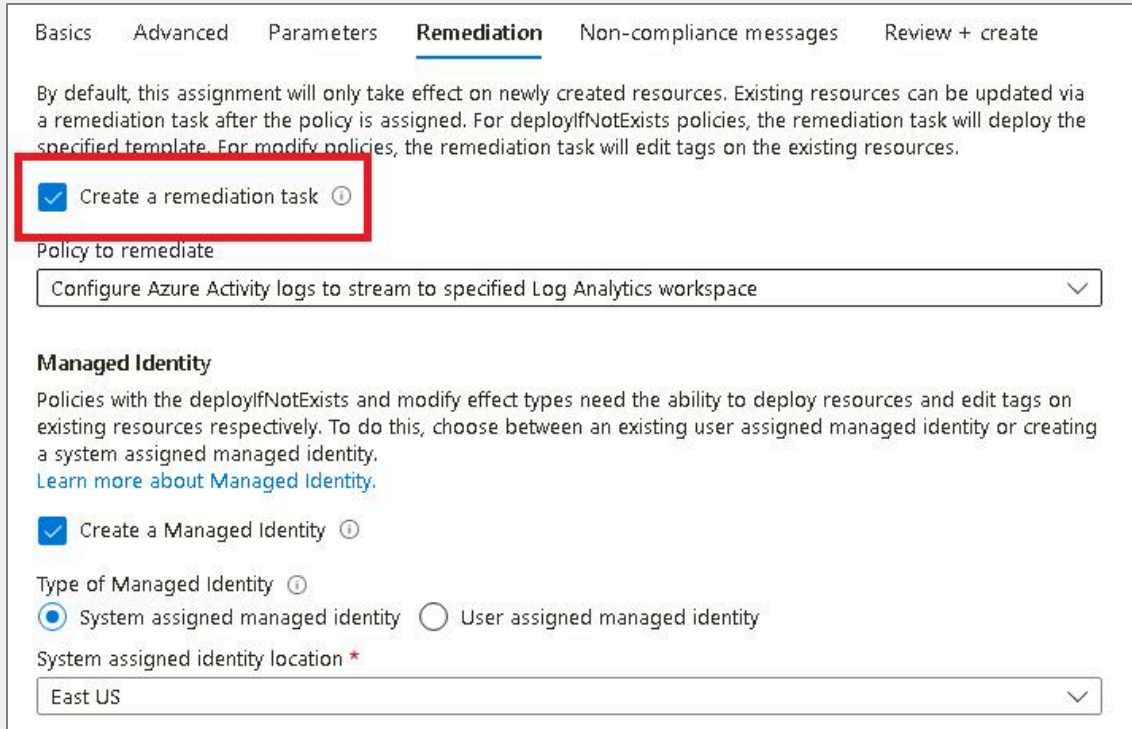

- Select Next, review the available options, and then select **Next** to proceed to the Parameters tab.
- On the Parameters tab, in Primary Log Analytics workspace, select the three dots to the right of the dropdown menu.
- On the Primary Log Analytics workspace blade, in Subscription, select your available subscription, in workspaces, select **SentinelHexelo-LAW**, and then choose **Select**.

💡 Want to learn more? Review the documentation on [configuring Azure Activity logs to stream to a Log Analytics workspace](#).

- Create a remediation task to configure Azure Activity logs to stream to the **SentinelHexelo-LAW** workspace.

 Expand this hint for guidance on creating a remediation task. 

- Select Next to advance to the Remediation tab, and then enable **Create a remediation task**.

The screenshot shows the 'Remediation' tab in the Azure Policy console. The 'Create a remediation task' checkbox is checked and highlighted with a red box. Below it, the 'Policy to remediate' dropdown is set to 'Configure Azure Activity logs to stream to specified Log Analytics workspace'. Under the 'Managed Identity' section, 'Create a Managed Identity' is checked, and 'System assigned managed identity' is selected as the type. The 'System assigned identity location' is set to 'East US'.

Basics Advanced Parameters **Remediation** Non-compliance messages Review + create

By default, this assignment will only take effect on newly created resources. Existing resources can be updated via a remediation task after the policy is assigned. For deployIfNotExists policies, the remediation task will deploy the specified template. For modify policies, the remediation task will edit tags on the existing resources.

☒ Create a remediation task ⓘ

Policy to remediate

Configure Azure Activity logs to stream to specified Log Analytics workspace

Managed Identity

Policies with the deployIfNotExists and modify effect types need the ability to deploy resources and edit tags on existing resources respectively. To do this, choose between an existing user assigned managed identity or creating a system assigned managed identity.

- Select Review + create, and then select **Create**.

 Want to learn more? Review the documentation on [creating a Remediation task](#).

 A remediation task in Microsoft Sentinel is a part of the response process to security threats. 

Once an investigation is underway in Sentinel, Security Operations Center (SOC) Analysts are tasked with responding to true threats and preventing malicious activity from further occurring. With Sentinel's Incidents, SOC's have a collection of entities, events, and alerts to analyze and determine what resources need further security or remediation.

- Leave the Threat Intelligence tab open, and then in Microsoft Edge, open a new tab.

Want to learn more? Review the documentation on [Threat intelligence integration in Microsoft Sentinel](#).

Threat Intelligence in Microsoft Sentinel refers to information describing existing or potential threats to systems and users.

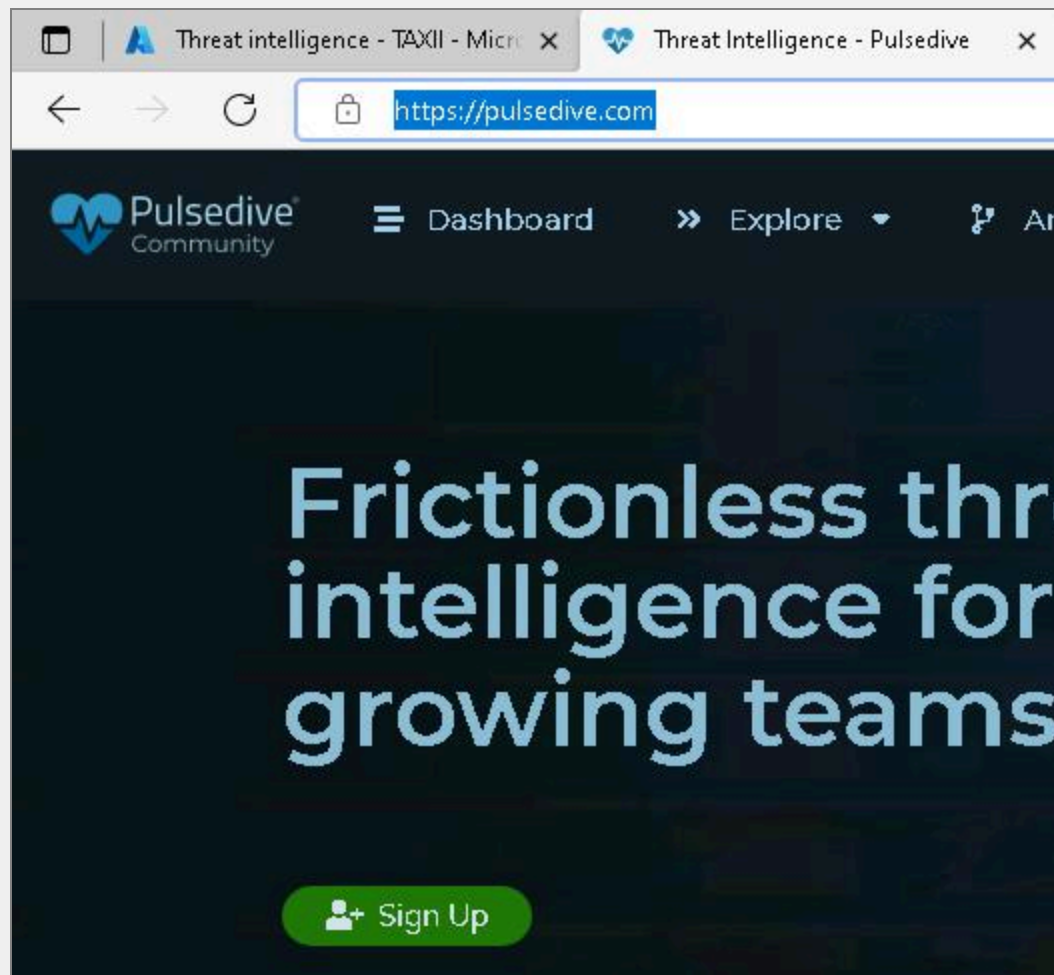

This intelligence takes many forms, from detailed reports about a particular threat actor's motivations, infrastructure, and techniques, to specific observations of IP addresses, domains, file hashes, and other artifacts associated with known cyber threats.

- Navigate to <https://pulsedive.com/>, and then connect a service to provide your TAXII data. Use the values in the following table to register an account.

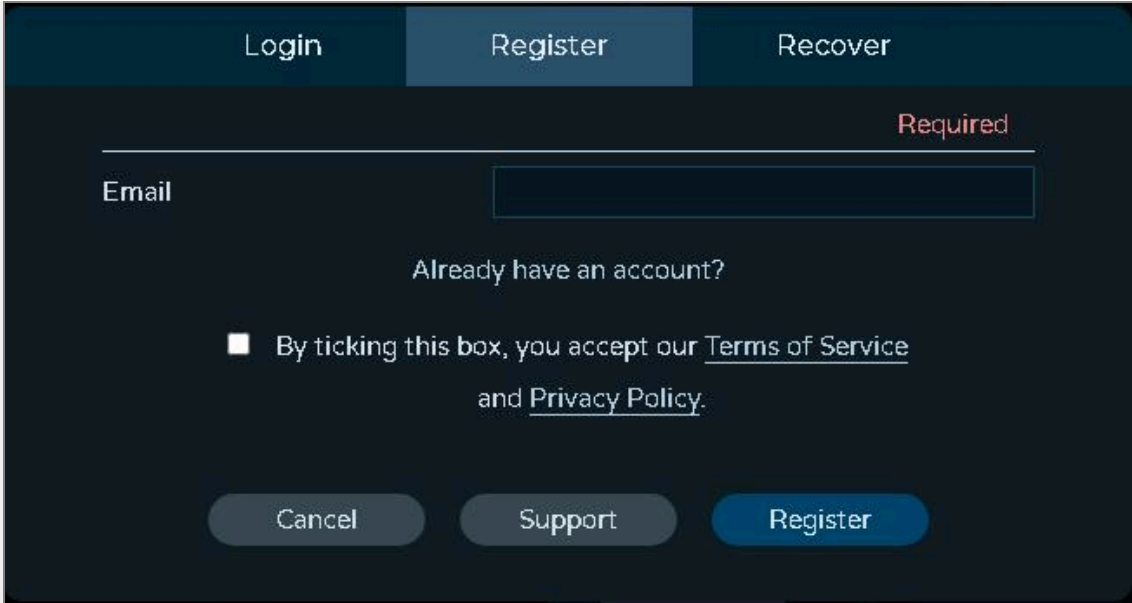

Property	Value
Email	Your Email
Username	 User1{LAB_INSTANCE_ID}
Password	 PA{PASSWORD}
Job Title	 Administrator
Company or Organization	 Hexelo

💡 Expand this hint for guidance on connecting a service.

- In Microsoft Edge, in the new tab, enter <https://pulsedive.com/> and then on the Pulsedive homepage, select **Sign Up**.

- On the Register dialog, in email, enter your email address, and then enable the **By ticking this box...** checkbox.

- Check your email inbox for your registration link, and then complete the registration page using the values in the table above.

registration.png

Want to learn more? Review the documentation on [Pulsedive](#).

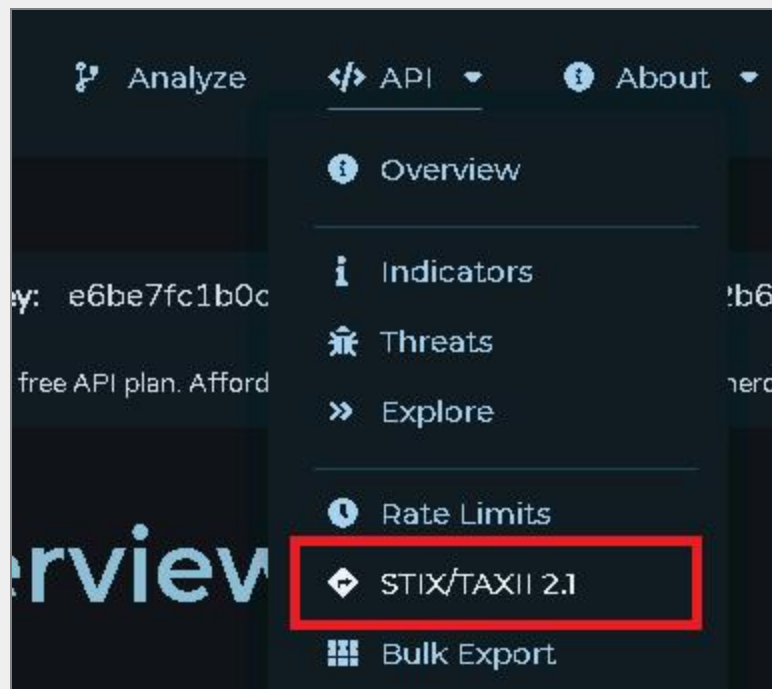

Pulsedive.com is an analyst-centric threat intelligence platform. It provides comprehensive community threat intelligence to help identify known threats.

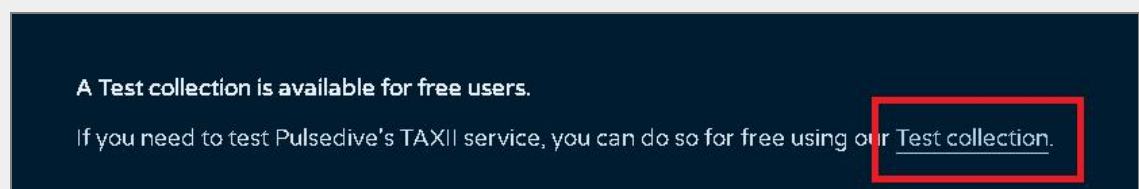

- Add the **Collection ID** to configure Threat Intelligence.

💡 Expand this hint for guidance on configuring Threat Intelligence.

- Log back in to your Pulsedive account.
- On the Dashboard page, on the menu bar, select **API**, and then select **STIX/TAXII**.

- On the STIX via TAXII detail page, scroll down, and then in *A Test collection is available for free users*, select **Test collection**.

- In Collections, locate the Pulsedive test data **Collection ID**, and then select the copy to clipboard icon to the right.

Collections

To retrieve Pulsedive data as STIX objects, you must query collections. Pulsedive currently has three collections available:

Pulsedive indicator data

Collection ID: `a5cfffbe-c0ff-4842-a235-`

This collection contains **indicator** objects.

It is readable only to Pulsedive customers.

Pulsedive threat data

Collection ID: `dc9ecfa5-7769-4cf3-b699-`

This collection contains **threat** objects.

It is readable only to Pulsedive customers.

Pulsedive test data

Collection ID: `981c4916-ebb2-4567-aec6-`

This is a test collection containing live, **sample indicator** objects.

It is available to anyone for free, for the purposes of testing, debugging, or even just learning about STIX and TAXII.

- Select the Azure Threat Intelligence tab, and then in Configuration, in Collection ID, right-click and select **Paste**.
- Leave the Threat Intelligence tab open, and then return to the **API - Pulsedive** tab.

Want to learn more? Review the documentation on [Connect Microsoft Sentinel to STIX/TAXII threat intelligence feeds](#).

A Collection ID refers to the identifier of a specific collection of threat intelligence data. ^

A Collection ID in Microsoft Sentinel is used to specify a particular collection of threat intelligence data that you want to import into Microsoft Sentinel for threat detection and response.

- Add the **API key** as the Password to configure Threat Intelligence.

💡 Expand this hint for guidance on configuring Threat Intelligence.

- On the Dashboard page, on the menu bar, select **API | Overview**.
- On the Overview page, locate **Your API key**, select the copy to clipboard icon, and then select the Threat intelligence - TAXII tab.
- On the Instructions tab, in Configuration, in Password, right-click and select **Paste**.
