Add Comments and Docstrings by Using Copilot

Challenge Overview

Understand the scenario

You are a Developer at Hexelo, an organization that needs to improve the documentation of a new Python utility module. In this Challenge Lab, you will use GitHub Copilot to automatically generate docstrings for several functions. Next, you will leverage Copilot Chat to add clarifying inline comments to a more complex function. Finally, you will complete the documentation by adding a module-level docstring and then verifying all of your work using Python's built-in pydoc utility.

⚠ You must complete the **Set Up Git and Connect to GitHub** setup lab before starting any challenge in this series. The set-up lab should only be completed once.

Navigating the Challenge Lab

Generate function docstrings with Copilot

Hints Enabled

No Yes

 You must complete the **Set Up Git and Connect to GitHub** setup lab before starting any challenge in this series. The set-up lab should only be completed once.

- Sign in to the virtual machine as **LabUser** by using **Passw0rd!** as the password.
- Enter your GitHub Username, Email Address, and Password into the following associated textboxes:

GitHub Username

GitHub Email Address

GitHub Password

- Sign in to **Visual Studio Code** with your GitHub account as **<GithubUN>** by using **<GithubPW>** as the password.

💡 Expand this hint for guidance on signing in to GitHub in Visual Studio Code.

- On the Windows taskbar, in Search, enter **Visual Studio Code**, and then select **Visual Studio Code**.
- In the bottom right-hand corner, select *Signed out*, select **Sign in to use Copilot**, and then sign in as **<GithubUN>** by using **<GithubPW>** as the password.

- Select **Continue**, and then select **Open** in the pop-up window.

📄 You may close the *Welcome* tabs.

- Create the **copilot_docs** project directory in the **D:\LabFiles** folder, and then create a new file named **math_utils.py**.

💡 Expand this hint for guidance on creating the `copilot_docs` project directory and `math_utils.py` file. ^

- In **Visual Studio Code**, select the **Terminal** menu, and then select **New Terminal**.
- Open a new terminal, and then change directories to the **D:\LabFiles** folder by using `cd D:\LabFiles`.
- Create the `copilot_docs` project directory by entering `mkdir copilot_docs`, and then press **Enter**.

```
PS C:\Users\LabUser> cd D:\LabFiles
PS D:\LabFiles> mkdir copilot_docs

Directory: D:\LabFiles

Mode                LastWriteTime         Length Name
----                -
d-----          1/20/2026   2:39 PM             copilot_docs

PS D:\LabFiles> |
```

- Change to the working directory by entering `cd copilot_docs`, and then press **Enter**.
- Enter `code .`, and then press **Enter** to open the folder in Visual Studio Code.
- In the pop-up, *Do you trust the authors of the files in this folder?*, select **Yes, I trust the authors**.
- In the **Explorer** pane on the left, in the **COPLOT_DOCS** project directory, select the **New File** icon.

- Enter `math_utils.py`, and then press **Enter** to create the file.

Want to learn more? Review the documentation on using the [integrated terminal in Visual Studio Code](#).

When you open the folder, **Visual Studio Code** may ask *Do you trust the authors of the files in this folder?*. Select **Yes, I trust the authors**.

You may close any additional **Visual Studio Code** windows.

- Add the `T` `add_numbers` function and generate its docstring by using the following:

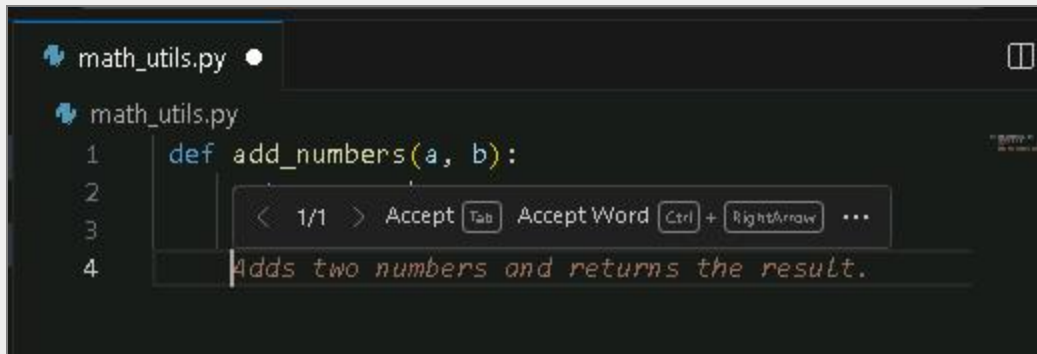

Python

```
def add_numbers(a, b):  
    return a + b
```

💡 Expand this hint for guidance on adding the `add_numbers` function and generating its docstring. ^

- In the **math_utils.py** editor window, enter the Python code supplied above.
- Place your cursor on the line directly below the first line of **def add_numbers(a, b):**, enter `T ""`, and then press **Enter**.
- Wait for the ghost text suggestion from Copilot to appear.

The screenshot shows a code editor with a file named `math_utils.py`. The function `def add_numbers(a, b):` is defined on line 1. On line 2, the user has entered `T ""`. A ghost text suggestion from Copilot is visible on line 4, showing the text `Adds two numbers and returns the result.` in a faded font. A tooltip above the suggestion shows navigation options: `< 1/1 > Accept [Tab] Accept Word [Ctrl] + [RightArrow] ...`.

- Select the **Tab** key to accept the suggested docstring, and then press **Enter**.
- Continue selecting **Tab** and **Enter** until your script looks like the following:

The screenshot shows the completed `add_numbers` function in `math_utils.py`. The function is defined on line 1. The docstring is multi-line, starting with `"""` on line 2 and ending with `"""` on line 9. The docstring content includes: `Adds two numbers together.` on line 3, `Parameters:` on line 4, `a (int or float): The first number.` on line 5, `b (int or float): The second number.` on line 6, `Returns:` on line 7, and `int or float: The sum of a and b.` on line 8. The function body on line 10 is `return a + b`.

- Select the **File** menu, and then select **Save**.

💡 Want to learn more? Review the documentation on [getting started with GitHub Copilot](#).

❓ Copilot's ghost text suggestions appear as faded text directly in your editor. If a suggestion does not appear immediately, wait a moment or start entering the expected ^

text to give it more context.

You can cycle through suggestions with **Alt+]** (or **Option+]**) and accept them by selecting the **Tab** key.

- Add the `multiply_numbers` function and generate its docstring with a natural language prompt by using the prompt `# Generate a descriptive docstring for this function` and the following Python code:

Python

```
 def multiply_numbers(a, b):  
    return a * b
```

💡 Expand this hint for guidance on adding the `multiply_numbers` function and generating its docstring with a natural language prompt. ^

- At the end of the **math_utils.py** file, add a few new lines, then add the Python code from above.
- On the line directly above the **def multiply_numbers(a, b):** line, enter the following comment: `T # Generate a descriptive docstring for this function.`

```
math_utils.py
math_utils.py
1  def add_numbers(a, b):
2      return a + b
3      """
4      Adds two numbers and returns the result.
5      Parameters:
6      a (int, float): The first number.
7      b (int, float): The second number.
8      Returns:
9      int, float: The sum of the two numbers.
10     """
11
12     # Generate a descriptive docstring for this function
13     def multiply_numbers(a, b):
14         return a * b
```

- Place your cursor on the line directly below the **multiply_numbers** function definition.
- Enter `T """`, and then wait for Copilot to suggest a multi-line docstring based on your prompt.
- Select the **Tab** key to accept the suggestion, and then press **Enter**.
- Continue selecting **Tab** and **Enter** until your script looks like the following:

```
math_utils.py X
math_utils.py
1 def add_numbers(a, b):
2     """
3     Adds two numbers together.
4     Parameters:
5     a (int or float): The first number.
6     b (int or float): The second number.
7     Returns:
8     int or float: The sum of a and b.
9     """
10    return a + b
11
12    # Generate a descriptive docstring for this function
13    def multiply_numbers(a, b):
14        """
15        Multiplies two numbers together.
16        Parameters:
17        a (int or float): The first number.
18        b (int or float): The second number.
19        Returns:
20        int or float: The product of a and b.
21        """
22        return a * b
23
```

- Select the **File** menu, and then select **Save**.

Check your work

Verify

Add inline comments to a function with Copilot

Hints Enabled

No Yes

- Add the `subtract_numbers` function to the **math_utils.py** file by using the following prompt:

Create a Python function named `subtract_numbers` that subtracts the second number from the first.
Include a properly formatted triple-quoted docstring that explains:

- What the function does
- Parameters `a` and `b` (int or float)
- The return value and its type

Follow PEP 257 docstring conventions.

```
21  """
22  |
23  def subtract_numbers(a, b):
24      """
25      Subtracts the second number from the first.
26
27      Parameters:
28          a (int or float): The number from which to subtract.
29          b (int or float): The number to subtract.
30
31      Returns:
32          int or float: The result of a minus b.
33      """
34      return a - b
```

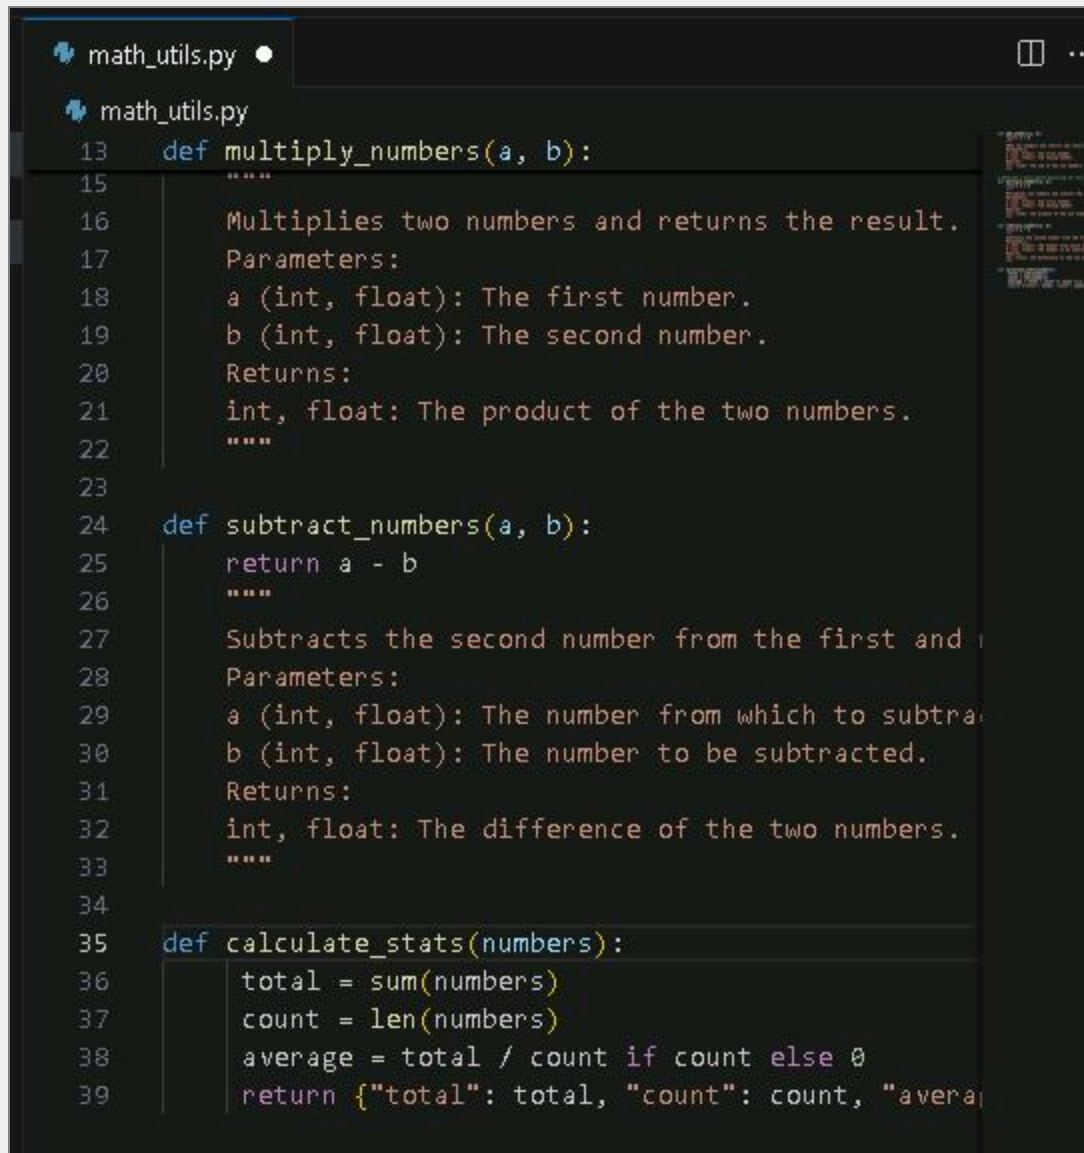

- Add the `calculate_stats` function to the **math_utils.py** file by using the following Python code:

Python

```
def calculate_stats(numbers):
    total = sum(numbers)
    count = len(numbers)
    average = total / count if count else 0
    return {"total": total, "count": count, "average": average}
```

💡 Expand this hint for guidance on adding the `calculate_stats` function to the `math_utils.py` file.

- At the end of the **`math_utils.py`** file, enter the code supplied above.

```
math_utils.py
math_utils.py
13 def multiply_numbers(a, b):
14     """
15     Multiplies two numbers and returns the result.
16     Parameters:
17     a (int, float): The first number.
18     b (int, float): The second number.
19     Returns:
20     int, float: The product of the two numbers.
21     """
22
23
24 def subtract_numbers(a, b):
25     return a - b
26     """
27     Subtracts the second number from the first and
28     Parameters:
29     a (int, float): The number from which to subtract
30     b (int, float): The number to be subtracted.
31     Returns:
32     int, float: The difference of the two numbers.
33     """
34
35 def calculate_stats(numbers):
36     total = sum(numbers)
37     count = len(numbers)
38     average = total / count if count else 0
39     return {"total": total, "count": count, "average": average}
```

💡 Want to learn more? Review the documentation on [Python functions](#).

- Add inline comments to the `T calculate_stats` function with Copilot Chat by using the following comment and textbox prompts:
 - Comment:

📄 # Add inline comments to the selected code.

- Prompt:

Add inline comments to the selected code. Do not change or edit the function itself.

Expand this hint for guidance on adding inline comments to the `calculate_stats` function with Copilot Chat. ^

- On the line directly above the **def calculate_stats(numbers):** line, enter the comment: `# Add inline comments to the selected code..`
- Select the lines of code inside the **calculate_stats** function, and then select **Ctrl+I** to open the **GitHub Copilot Inline Chat** window.
- In the prompt box that appears, enter `# Add inline comments to the selected code. Do not change or edit the function itself.`, and then press **Enter**.

```
34     return a = 0
35
36 #Add inline comments to the selected code. Do not change or edit the function itself.
37 def calculate_stats(numbers):
38     # Calculate the sum of all numbers in the list
39     total = sum(numbers)
40     # Get the count of numbers in the list
41     count = len(numbers)
42     # Compute the average, avoid division by zero
43     average = total / count if count else 0
44     # Return a dictionary with total, count, and average
45     return {"total": total, "count": count, "average": average}
```

- Review the changes proposed by Copilot.
- Select the **Accept** button to apply the inline comments.
- Select the **File** menu, and then select **Save**.

Want to learn more? Review the documentation on [using Copilot Inline chat](#).

AI-generated code and comments should always be carefully reviewed. ^

While tools like GitHub Copilot are powerful, they can sometimes produce incorrect or suboptimal suggestions. Always verify the logic and accuracy of the generated content before accepting it into your codebase.

Check your work

Verify

Add a module docstring and verify documentation

Hints Enabled

No Yes

- Add a module-level docstring to the **math_utils.py** file by using the following:

Python

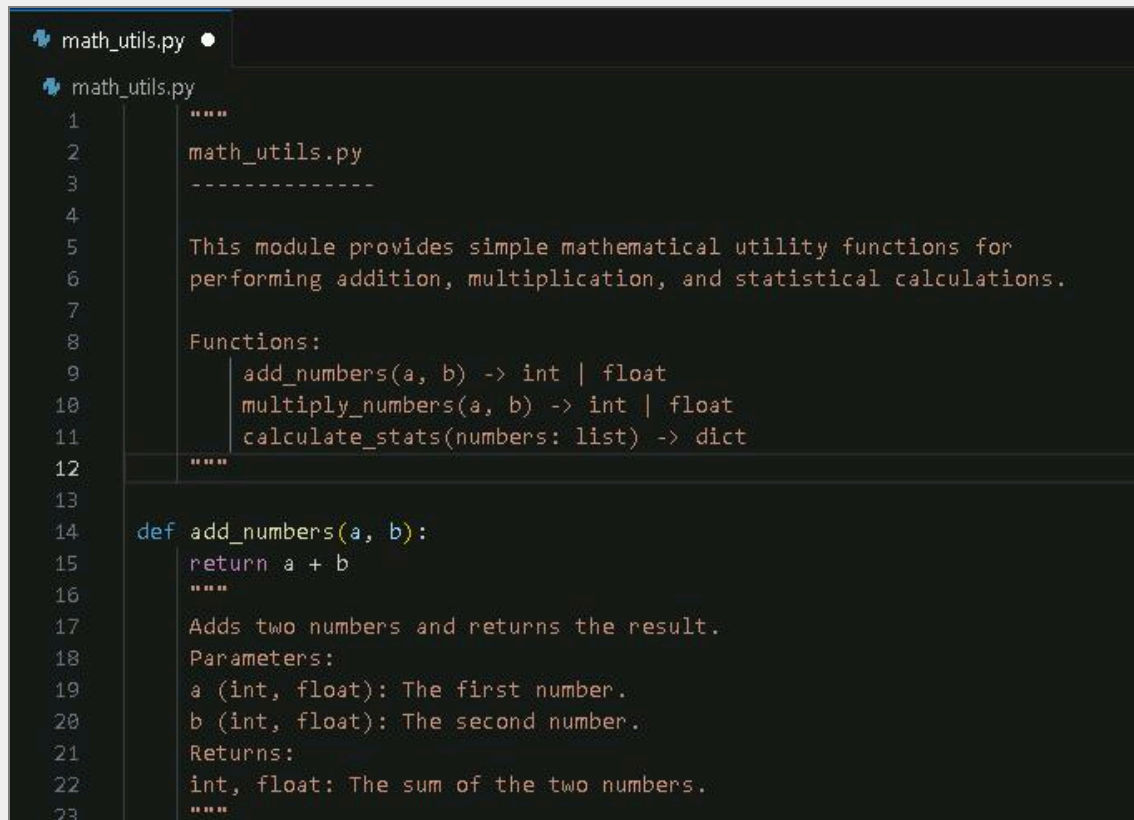

```
"""
math_utils.py
-----

This module provides simple mathematical utility functions for
performing addition, multiplication, and statistical calculations.

Functions:
    add_numbers(a, b) -> int | float
    multiply_numbers(a, b) -> int | float
    calculate_stats(numbers: list) -> dict
"""
```

💡 Expand this hint for guidance on adding a module-level docstring to the `math_utils.py` file. ^

- Navigate to the very top of the **math_utils.py** file, before any other code.
- On the first line, enter the multi-line docstring supplied above.

```

1  """
2  math_utils.py
3  -----
4
5  This module provides simple mathematical utility functions for
6  performing addition, multiplication, and statistical calculations.
7
8  Functions:
9      add_numbers(a, b) -> int | float
10     multiply_numbers(a, b) -> int | float
11     calculate_stats(numbers: list) -> dict
12 """
13
14 def add_numbers(a, b):
15     return a + b
16     """
17     Adds two numbers and returns the result.
18     Parameters:
19     a (int, float): The first number.
20     b (int, float): The second number.
21     Returns:
22     int, float: The sum of the two numbers.
23     """

```

- Select the **File** menu, and then select **Save**.

💡 Want to learn more? Review the documentation on [Python Docstring Conventions \(PEP 257\)](#).

- In **math_utils.py**, select **Ctrl+A**, and then select **Ctrl+C** to copy the entire script.
- In the **GitHub Copilot Chat** textbox to the right, enter **T** Fix all indentation issues, paste the entire script, and then select **Send**.

📄 You can use **Ctrl+Shift+I** to open the GitHub Copilot Chat textbox.

- Accept the changes and save the file.
- Verify the module documentation by entering the following into the **VS Code** integrated terminal:

Python

 `python -m pydoc copilot_docs.math_utils`

 Expand this hint for guidance on verifying the module documentation with the `pydoc` command. 

- In Visual Studio Code, select the **Terminal** menu, and then select **New Terminal**.
- If the terminal prompt shows you are inside the **copilot_docs** directory, enter `T cd D:\LabFiles`, and then press **Enter** to move to the parent directory.
- In the terminal, enter the command `T python -m pydoc copilot_docs.math_utils`, and then press **Enter**.
- Review the output in the terminal to confirm the module docstring, function docstrings, and comments are displayed correctly.

```
PS D:\LabFiles> python -m pydoc copilot_docs.math_utils
Help on module copilot_docs.math_utils in copilot_docs:

NAME
    copilot_docs.math_utils

DESCRIPTION
    math_utils.py
    -----

    This module provides simple mathematical utility functions for
    performing addition, multiplication, and statistical calculations.
    -- More --
```

- Repeatedly press **Enter** (or press the **Spacebar**) until you return to the **PS D:\LabFiles>** prompt.

```
    a (int, float): The first number.
    b (int, float): The second number.
    Returns:
        int, float: The product of the two numbers.

FILE
    d:\labfiles\copilot_docs\math_utils.py

PS D:\LabFiles>
```

 Want to learn more? Review the documentation on [pydoc - documentation generator and online help system](#).

② The finished script example:

Your script should look similar to the example below.

```
math_utils.py x
math_utils.py
1  """
2  math_utils.py
3  -----
4
5  This module provides simple mathematical utility functions for
6  performing addition, multiplication, and statistical calculations.
7
8  Functions:
9      add_numbers(a, b) -> int | float
10     multiply_numbers(a, b) -> int | float
11     calculate_stats(numbers: list) -> dict
12 """
13
14 def add_numbers(a, b):
15     """
16     Adds two numbers together.
17     Parameters:
18     a (int or float): The first number.
19     b (int or float): The second number.
20     Returns:
21     int or float: The sum of a and b.
22     """
23     return a + b
24
25 # Generate a descriptive docstring for this function
26 def multiply_numbers(a, b):
27     """
28     Multiplies two numbers together.
29     Parameters:
30     a (int or float): The first number.
31     b (int or float): The second number.
32     Returns:
33     int or float: The product of a and b.
34     """
35     return a * b
36
37 def subtract_numbers(a, b):
38     """
39     Subtract the second number from the first.
40
41     Subtract b from a and return the difference.
42
43     Parameters:
44     a (int or float): The minuend.
45     b (int or float): The subtrahend.
46
47     Returns:
48     int or float: The difference a - b.
49     """
50     return a - b
51
52 # Add inline comments to the selected code.
53 def calculate_stats(numbers):
54     # Sum all items in the sequence to get the total
55     total = sum(numbers)
56     # Determine how many items are present
57     count = len(numbers)
58     # Calculate average, protecting against division by zero
59     average = total / count if count else 0
```

```

58     average = total / count if count else 0
59     # Return results as a dictionary
60     return {"total": total, "count": count, "average": average}

```

- Use the Python Interactive Shell to import and test a module to *D:\LabFiles* by using the following in a command prompt, and then call the **add_numbers** function using `add_numbers(2, 3)`.

```
from copilot_docs.math_utils import add_numbers, subtract_numbers, calculate
```

💡 Expand this hint for guidance on using Python to test a module. ^

- Open a **Command Prompt** window by entering `cmd` in the Windows taskbar Search.
- Change to the **D** drive by entering the following, and then press **Enter**:

```
D:
```

- Start the Python interactive shell by entering the following, and then press **Enter**:

```
python
```

- Verify that the `>>>` Python prompt appears.
- Import functions from the module by entering the command supplied above, and then press **Enter**.
- Call the **add_numbers** function to verify the import by entering the following, and then press **Enter**:

```
add_numbers(2, 3)
```

- Confirm that Python returns the expected result: **5**.

- Test the **subtract_numbers** function by entering the following, and then press **Enter**:

```
Python
```

```
subtract_numbers(50, 25)
```

- Confirm that Python returns the expected result: **25**.

Check your work

Verify

Summary

Congratulations, you have completed the **Add Comments and Docstrings by Using Copilot** Challenge Lab.

You have accomplished the following:

- Generated function docstrings with Copilot.
- Added inline comments to a function with Copilot.
- Added a module docstring and verified documentation.

Ending your lab

To ensure your lab is recorded as complete, select **Submit** or **End** below. Exiting [X] the lab will result in an incomplete status.

 Once you select **Submit** or **End**, you will not be able to return to this Challenge Lab.

Your feedback is important!

As you end your Challenge Lab, please take a few minutes to complete the short survey that will appear in the next window. Alternatively, you may provide your feedback directly to [Challenge Labs feedback](#).
