

Manage Tables and Table Data in Microsoft Excel by Using Copilot

Challenge Overview

Understand the scenario

You are a Business User for Hexelo, an organization that manages tables and table data in Microsoft Excel. First, you will create a table on a worksheet, and then you will use Copilot to add a total row to a table and add calculations to the total row. Next, you will configure the total rows for the table, and then you will sort the table alphabetically and by decreasing quantity. Next, you will populate a new row with data, and then you will resort the table. Finally, you will format a table to use a quick style from the dark styles section of the table styles gallery.

Navigating the Challenge Lab

- ▼ Quick tips for navigating the Challenge Lab instructions.
- Select the Copy to Clipboard icon to copy the green text.
- Select the Type Text icon to insert the green text directly into the Challenge Lab environment.

 An Alert tells you that a task requires extra care.

 A Note provides additional helpful information for completing a task.

 A Hint will guide you through a portion of the Challenge Lab.

 A Knowledge block provides a deeper level of knowledge into a subject. It is a great way to solidify your understanding, but it is not strictly necessary to complete the Challenge Lab.

Create a table from all data in a range of cells

Hints Enabled

No ☒ Yes

- Log in to the Virtual Machine (VM) as Admin by using **T** Passw0rd! as the password.

💡 Expand this hint for guidance on logging in to a Virtual Machine (VM):

The screenshot shows a video player interface. The main video area displays a Windows login screen for a user named 'Admin' with a password field. The video progress bar at the bottom indicates 0:00 / 1:09. To the right of the video is a hint panel titled 'Microsoft Office Excel Challenge Series Base Template' with a 'Hints Enabled' toggle set to 'Yes'. The hint panel contains a list of instructions, including logging in to the VM, opening Microsoft Excel, enabling the Text Import Wizard, and importing a file.

📄 Select the **T** Type text icon to enter the associated text into the current field on the Virtual Machine (VM).

- Sign in to **T** <https://portal.office.com> as **T** {USERNAME} by using **T** {PASSWORD} as the password, and then open **Excel**.

💡 Expand this hint for guidance on opening Microsoft Excel.

- Open Microsoft Edge, navigate to <https://portal.office.com>, and then sign in as [T {USERNAME}](#) by using [T {PASSWORD}](#) as the password.
- Click through and close the Welcome banners.
- On the Welcome to Microsoft 365 Home page, select the App installer icon in the upper left-hand corner, and then select **Microsoft Excel**.

- On the Excel|Microsoft 365 Home page, in Create new, select **Blank workbook**.

💡 Want to learn more? Review the documentation on [Microsoft Excel for the web](#).

📄 Close any Welcome or Sign-in windows.

- On the Stay signed in dialog, select **No**.
- Close the **Welcome to Microsoft 365** window.

- Close the **Create with Microsoft 365** window.
- Open the  **D:\LabFiles\Invoice 20230701.xlsx** workbook, and then select the **Invoice Data** worksheet.

💡 Expand this hint for guidance on opening a workbook.

- On the menu bar, select **File**, select **Open**, select **Open files from this device**, and then navigate to the **D:\LabFiles** folder.
- Locate, and then select the **Invoice 20230701.xlsx** workbook to upload it to your OneDrive account.

- Select **File**, select **Open**, and then select **View more files**.

- On the OneDrive|Home page, in the Quick access panel to the left, select **My files**.

- Select the **Invoice 20230701.xlsx** workbook to open it in the Microsoft Excel web app.

 Want to learn more? Review the documentation on [opening a workbook](#).

- Create a table named **T InvoiceData** by using all of the data in the worksheet.

💡 Expand this hint for guidance on creating a table from a range of cells.

- On the Invoice Data worksheet, select any cell that contains data.
- On the Insert tab of the ribbon, select the Tables dropdown, and then select **Table**.

- On the Create Table dialog, ensure that the Where is the data for your table field shows the cell range **A1:E73**.

- If another range appears, change it to **A1:E73**.
- Ensure that the My table has headers checkbox is selected, and then select **OK**.
- On the Table Design tab of the ribbon, change the name that appears in the Table Name field to **InvoiceData**, and then press **Enter** to ensure the name change is accepted.

💡 Table names (and the names that you create for any other objects in Excel) must start with a letter. Names can include numbers but must not include spaces or special symbols (for example *, &, /). Want to learn more? Review the documentation on [creating a table from a range of cells](#).

- Use Copilot to add a **total row** to the table, and then add the following calculations to the total row:

Column	Calculation
Product Name	Display the number of product names listed in the table.
Unit Price	Display the average unit price for products.
Extended Price	Display the grand total for all cells in the Extended Price column.

💡 Expand this hint for guidance on configuring total rows for tables. ^

- On the menu bar, on the Home tab, select **Copilot**.

- Select any cell that is part of the table.
- On the Copilot blade, in the Prompt area, enter the following prompt, and then select **Send**: **T** Add a total row to the InvoiceData table.

- Scroll to the bottom of the table. Select the total row cell (**B74**) for the Product Name column, and then select **Count** from the drop-down list that appears.

- Select the total row cell (**D74**) for the **Unit Price** column, and then select **Average** from the drop-down list that appears.

- Select the total row cell (**E74**) for the **Extended Price** column, and then select **Sum** from the drop-down list that appears.

 Want to learn more? Review the documentation on [configuring total rows for table](#).

 If a table does not have a total row, you can add new rows to the row in Excel just below the last table row. ^

Excel will automatically update the table definition to include the new row in the table. However, when the table includes a total row, you cannot use this technique. Instead, right-click the row number for any row in the table and select **Insert**. A new row will be added above the row you selected.

- Save the **Invoice 20230701.xlsx** workbook in the  **D:\LabFiles** folder, and then leave the document open for the next task.

💡 Expand this hint for guidance on saving a workbook.

- Select File|Save as, select **Save as**, and then select **Download a Copy**.

- Leave the **Invoice 20230701.xlsx** workbook open, and then navigate to the **Downloads** folder to view your saved file.

- Select the **Invoice 20230701.xlsx** workbook, and then move it to the **T D:\LabFiles** folder.
- On the Replace or Skip Files dialog, select **Replace the file in the destination**.

 Want to learn more? Review the documentation on [saving a workbook](#).

 It is important that you save your files by using the name and location provided. These files will be used as part of the verification process in the *Check your work* section.

Format the table and add an additional data row

Hints Enabled

No ☒ Yes

- Ask Copilot to sort the table alphabetically by **Product Code**.

💡 Expand this hint for guidance on sorting data by using multiple columns. ^

- Select any cell that is part of the table.
- On the Copilot blade, in the Prompt area, enter the following prompt, and then select **Send**: **T** Sort the table alphabetically by product code.

- Your table should look like the following:

1	Product Code	Product Name
2	B-1	Chai
3	B-34	Beer
4	B-34	Beer
5	B-43	Coffee
6	B-43	Coffee
7	B-43	Coffee
8	B-43	Coffee
9	B-43	Coffee
10	B-43	Coffee
11	B-43	Coffee
12	B-43	Coffee
13	B-43	Coffee
14	B-81	Green Tea
15	BGM-19	Chocolate Biscuits Mix
16	BGM-85	Brownie Mix
17	BGM-85	Brownie Mix
18	BGM-85	Brownie Mix
19	BGM-85	Brownie Mix
20	BGM-85	Brownie Mix
21	BGM-85	Brownie Mix
22	C-82	Granola
23	CA-48	Chocolate
24	CFV-92	Green Beans
25	CFV-93	Corn
26	CFV-93	Corn

💡 Want to learn more? Review the documentation on [sorting data by using multiple columns](#).

- For each Product Code, sort the rows by **decreasing** quantity.

💡 Expand this hint for guidance on sorting data by using multiple columns.

- On the Data tab of the ribbon, select **Custom Sort**, and then select **+Add**.
- In the newly added **Then by** level, in Column, select **Quantity**, in the Order field, select **Sort Descending**, and then select **OK**.

- Your table should look like the following:

	Product Code	Product Name	Quantity	Unit Price	Extended Price
1	Product Code	Product Name	Quantity	Unit Price	Extended Price
2	B-1	Chai	1	\$18.00	\$18.00
3	B-34	Beer	11	\$14.00	\$154.00
4	B-34	Beer	10	\$14.00	\$140.00
5	B-43	Coffee	41	\$46.00	\$1,886.00
6	B-43	Coffee	41	\$46.00	\$1,886.00
7	B-43	Coffee	41	\$46.00	\$1,886.00
8	B-43	Coffee	41	\$46.00	\$1,886.00
9	B-43	Coffee	41	\$46.00	\$1,886.00
10	B-43	Coffee	23	\$46.00	\$1,058.00
11	B-43	Coffee	23	\$46.00	\$1,058.00
12	B-43	Coffee	23	\$46.00	\$1,058.00
13	B-43	Coffee	23	\$46.00	\$1,058.00
14	B-81	Green Tea	37	\$2.99	\$110.63
15	BGM-19	Chocolate Biscuits Mix	32	\$9.20	\$294.40
16	BGM-85	Brownie Mix	35	\$12.49	\$437.15
17	BGM-85	Brownie Mix	35	\$12.49	\$437.15
18	BGM-85	Brownie Mix	35	\$12.49	\$437.15
19	BGM-85	Brownie Mix	35	\$12.49	\$437.15
20	BGM-85	Brownie Mix	15	\$12.49	\$187.35
21	BGM-85	Brownie Mix	6	\$12.49	\$74.94
22	C-82	Granola	18	\$4.00	\$72.00

📄 For situations where you only need to sort a table by a single column, you can select the drop-down arrow for the column and configure sorting.

For situations where you need to sort by multiple columns, you must use the Sort button on the Data tab of the ribbon.

- Ask Copilot to add a row to the table.

 Expand this hint for guidance on adding a row to the table. 

- Select any cell that is part of the table.
- On the Copilot blade, in the Prompt area, enter the following prompt, and then select **Send**:  Add a row to the table.

- Your table should look like the following:

71	SO-41	Clam Chowder	7	\$9.65	\$67.55
72	SO-98	Vegetable Soup	22	\$1.89	\$41.58
73					
74	SO-98	Vegetable Soup	22	\$1.89	\$41.58
75	Total	0		18.07722222	\$38,499.43

 Want to learn more? Review the documentation on [adding a row to the table](#).

- Use the following values to populate the row with data:

Column	Value
Product Code	 EP-54
Product Name	 Fresh Mango
Quantity	 3

Column	Value
Unit Price	T 2.99
Extended Price	T 8.97

 Expand this hint for guidance on formatting tables.

^

- Select the cell in column **A** for the new row, and then enter

T

 EP-54.
- Select the cell in column **B** for the new row, and then enter

T

 Fresh Mango.
- Select the cell in column **C** for the new row, and then enter

T

 3.
- Select the cell in column **D** for the new row, and then enter

T

 2.99.
- Select the cell in column **E** for the new row, and then enter

T

 8.97.

71	SO-41	Clam Chowder	7	\$9.65	\$67.55
72	SO-98	Vegetable Soup	22	\$1.89	\$41.58
73	EP-54	Fresh Mango	3	\$2.99	8.97
74	SO-98	Vegetable Soup	22	\$1.89	\$41.58
75	Total	0		17.87054795	\$38,499.43
76					

 Want to learn more? Review the documentation on [formatting tables](#).

- Ask Copilot to resort the table by **Product Code**, and then by descending quantity.

💡 Expand this hint for guidance on resorting tables.

- Select any cell that is part of the table.
- On the Copilot blade, in the Prompt area, enter the following prompt, and then select **Send**: **T** Resort the table by Product Code, and then by descending quantity.

💡 Want to learn more? Review the documentation on [resorting tables](#).

📄 You already specified that data should be sorted by Product Code, and then by quantity (descending) earlier in the lab. The two levels of sorting should still be visible in the Sort dialog.

- Ask Copilot to format the table to use the Quick Style **Light Blue, Table Style Light 20** from the Light styles section of the Table Styles gallery.

💡 Expand this hint for guidance on formatting tables. ^

- Select any cell in the table.
- On the Copilot blade, in the Prompt area, enter the following prompt, and then select **Send**: **T** Format the table to use the Quick Style Light Blue, Table Style Light 20 from the Light styles section of the Table Styles gallery.

💡 Quick styles are sets of complementary formatting options for objects. Quick styles for tables include formatting for headers, footers, alternating rows, and other options. When you create a table, Excel will apply a default Quick Style to the table. Want to learn more? Review the documentation on [formatting tables](#).

⚠️ It is important that you save your files by using the name and location provided. These files will be used as part of the verification process in the *Check your work* section.

- Save the **Invoice 20230701.xlsx** workbook in the **T** D:\LabFiles folder, and then close the workbook.

Check your work

Verify

Summary

Congratulations, you have completed the **Manage Tables and Table Data in Microsoft Excel by Using Copilot** Challenge Lab.

You have accomplished the following:

- Created a table from all data in a range of cells.
- Formatted a table and added an additional data row.

Your feedback is important!

As you end your Challenge Lab, please take a few minutes to complete the short survey that will appear in the next window.

Alternatively, you may provide your feedback directly to [Challenge Labs feedback](#).

Be sure to check out the other Challenge Labs in this series:
